

Typescript

Home task:

- 1st point** setup typescript and configure tsconfig
- 2nd point** setup and configure tslint
- 3rd point** implement the interface for (any) DTO (Data Transfer Object) from the back-end and create a model based on it
- 4th point** implement the inheritance of an abstract class (any entity at your choice)
- 5th point** implement (at your choice) generic construction (for example, your Dictionary <KeyType, Value Type>)
